

Over the years many of the old types of Tachos were obsolete and replaced with the current manufactured models. The table below outlines the old and new equivalents of these tachos. When replacing an old tacho with a new tacho all parts must change (i.e. tach armature, tach stator and tach brush ring assembly).

The old tacho's can be easily identified by a black plastic brush holder, compared to the grey metal brush holder used on the current tacho models.
